Portable – lifts up to 200 kg/440 lbs – safe and flexible lifting solutions for all rail systems and situations

RisePorto is one of the lightest portable overhead lift units on the market. At the same time, it is both strong and safe and can lift users weighing up to 200 kg /440 lbs. RisePorto can be used on both permanently installed rail systems and on freestanding lift stands. The lift unit can be easily moved between different rail systems and rooms. The same lift unit can therefore be used for several patients, giving it a high degree of utilization. RisePorto is a priceworthy alternative that provides safe and flexible lifting solutions for all situations.

Stationary lifts are lift units that are mounted either on a ceiling rail system or on a freestanding lift stand. This is an ergonomically ideal alternative, since the system is always in place, it takes up minimal floor space and it is very easy to manoeuvre. Another advantage is that the system gives you a large lifting area and the possibility of both low and very high lifting.

Smart design with safe functions

RisePorto has a smart, innovative design that features a sling bar that is integrated with the lift unit. This simplifies use as well as transfer and handling of the lift unit. The lift unit is equipped with several safety functions that ensure safe, secure lifting, both for the patient and the caregiver. RisePorto is very easy to operate, either via the accompanying hand control or directly from the lift unit itself.

Pneumatic hand control

User-friendly buttons
Completely safe, even in wet areas
Hook for convenient storage on the sling bar

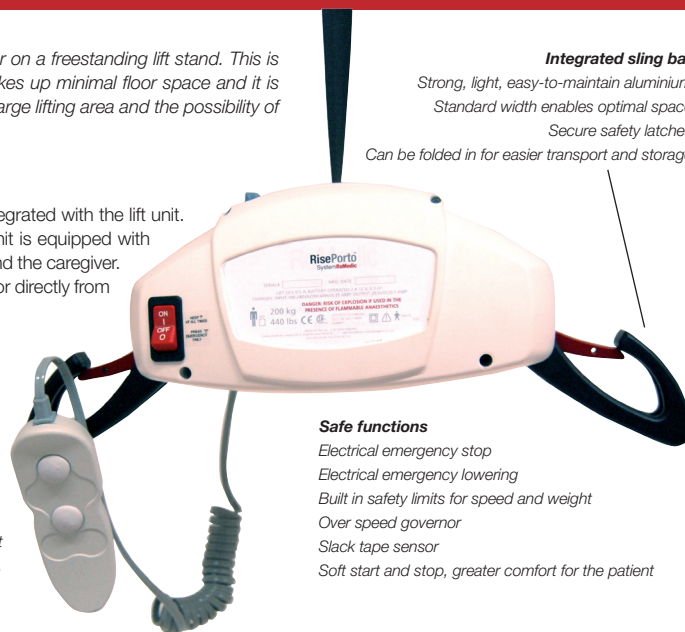

Simple, clearly marked buttons on the front of the lift unit can be used as a complement to the hand control.

Integrated sling bar

Strong, light, easy-to-maintain aluminium
Standard width enables optimal space
Secure safety latches
Can be folded in for easier transport and storage

Safe functions

Electrical emergency stop
Electrical emergency lowering
Built in safety limits for speed and weight
Over speed governor
Slack tape sensor
Soft start and stop, greater comfort for the patient

RisePorto has been part of the SystemRoMedic range for several years. The new version of RisePorto is one of the lightest portable ceiling lift units on the market. At the same time, it is both strong and safe. It has been developed to be used, in combination with the correct lifting accessories, for safe and convenient transfer of patients weighing up to 200 kg/440 lbs.

RisePorto can be used on both permanent rail systems (straight-rail systems with or without curves and switches, or traverse systems) and on portable, free-standing lift stands. A handle for mounting, which is available as an accessory, facilitates installation of the lift unit on the rail system and transfer of the lift unit between different rail systems and rooms when there is a need for lifting in different locations. With RisePorto, you can also perform easy and convenient transfers from one room to another.

RisePorto has a built-in battery with a long service life. A diode on the lift unit, together with audible signals, lets you know when the battery needs charging. The battery can be charged when the lift unit is on the rail system, which means that the unit is always charged and ready for use. The lift unit switches off automatically after ten minutes if it is not being used. This prolongs battery life.

RisePorto's design and features make it the perfect assistive device for home care, institutional care and other forms of residential care. The same lift unit can also be used for several users, giving it a high degree of utilization. RisePorto is a priceworthy alternative that provides safe and flexible lifting solutions for all situations.

RisePorto comes complete with a hand control. It can be used in combination with SystemRoMedic's rail systems or freestanding lift stands and with many smart and functional accessories in SystemRoMedic's range of products for safe and easy transfers. For example, lifting slings adapted for different types of lifting and for users with different needs.

More information on this is available at www.romedic.com and in the SystemRoMedic catalogue.

TECHNICAL INFORMATION

Lift unit:	24 VDC
Charger, input:	100-240 VAC, 0.35 Amp
Charger, output:	29.4 VDC, 0.5 Amp
Batteries:	24 VDC (2x12 VDC) 2.3 AH
Material, lift unit case:	Flame retardant ABS plastic
Hand control:	Pneumatic
Lifting range:	Up to 2005 mm / 789,3"
Weight:	4.8 kg / 10.5 lbs (with batteries)
Safe working load:	200 kg / 440 lbs
Internal fuses:	15 Amp
Rated performance:	15-20 lifts of 200 kg / 440 lbs from fully charged battery
Dimensions, lift unit:	479 x 190 x 162 mm / 18,85 x 7,48 x 6,37"

SystemRoMedic
"We love easy transfers"

The philosophy behind SystemRoMedic is simple. We love to develop and manufacture assistive devices that make life easier for both patients and personnel in the care sector.

System RoMedic comprises four product areas that meet most needs in different transfer situations.

- Transfer**, between two locations.
- Positioning**, in the same location.
- Support**, for mobility..
- Lift**, both manual and mechanical.
